SUMMARY

Program manager with 5+ years leading organizational change and technology adoption across large enterprises — building governance frameworks, driving process improvement, and translating business needs into technical execution. Proven ability to build process from scratch where none existed: mapped how AI tools were spreading through an organization with no support, and built a governance program — approval workflows, security boundaries, adoption tracking — from the ground up. Leads cross-functional initiatives across IT, Security, and business stakeholders without direct authority, using KPI dashboards to measure whether change actually took hold, not just whether it launched. Native Hebrew and English communicator, comfortable working independently with senior leadership.

CORE COMPETENCIES

AI governance & adoption program design • Process design from scratch, no existing playbook • **Cross-functional leadership without direct authority** • Change adoption measured by effectiveness, not launch • **Business-to-technical translation** • KPI dashboards & data-driven decisions • Bilingual executive communication (Hebrew & English)

WORK EXPERIENCE

Business Operations Manager | Keshet Media Group

2026

- **Governance program design from scratch:** built an AI tool governance program from nothing — no existing playbook — defining approval workflows, security boundaries, and acceptance criteria directly with the CISO, Security, and business leadership.
- **Change adoption & measured effectiveness:** identified 40+ employees using AI tools outside governance, surfaced the risk to leadership with a phased rollout plan, and tracked adoption KPIs to confirm the change was actually taking hold — not just that it launched.

IT Project Manager & Infrastructure Lead | Applied Materials

2023 – 2026

- **Cross-functional program ownership:** owned a multi-year program (1,200+ employee corporate office) end-to-end — scope, milestones, delivery, and status — coordinating Finance, IT, R&D, and outside contractors without direct authority over them.
- **Data-driven decision-making:** built automated KPI dashboards (SQL, Tableau) tracking schedule and budget performance, giving stakeholders and executives real-time, data-driven visibility to support informed decisions.
- **Business-to-technical translation & stakeholder alignment:** translated business priorities and technical constraints into clear updates for Finance, Purchasing, and senior leadership, running recurring planning cycles to keep stakeholders aligned as priorities evolved.

Operations Manager | IBM

2021 – 2023

- **Structured delivery under ambiguity:** directed IT transformation projects end-to-end with no fixed playbook, defining the process as requirements emerged and aligning matrixed teams against scope, budget, and schedule.
- **Risk management & crisis response:** led migration and disaster-recovery initiatives, surfacing risks early and adapting plans in real time as requirements shifted to keep systems stable for end users.
